

April 27, 2009

Dear Valued Gator Chemical Distributor:

There has been a public health emergency in the United States declared by the Department of Health and Human Services, in response to the rise in the number of confirmed cases reported of Swine Influenza (H1N1).

The Center for Disease Control (CDC) stated that "Swine influenza is a respiratory disease of pigs caused by **Type A influenza viruses.**" The CDC goes on to say "Pigs most commonly get infected with flu viruses from other pigs (Swine Flu), but also can get infected with flu viruses from birds (Avian Flu), and from people (Human Flu). This cross-species spread of flu viruses can lead to new types of flu viruses."

**DCS-100n and DCS-200n have been proven to kill influenza A type viruses.**

We recommend that you visit the CDC website at [www.cdc.gov/swineflu/](http://www.cdc.gov/swineflu/) ,for more updated information.

**As well, our DCS series of products are registered with the E.P.A. with a claim for CA-MRSA 300 & 400, the MRSA strains that have received so much publicity over the last 18 months.**

Efficacy studies are available for both products.

We will keep you informed as new developments transpire.

Thank you,

Duncan Yull  
President.
